AISP

INTERNATIONAL SERVICE

International hub for HSE platform implementation and management

Your operation in any country. A specialist team supporting it from Portugal.

Request a proposal for our operation

When operations cross borders

Every country has its own rules
Document and HSE requirements change with the country, the sector and the type of work.

Several companies, several ways
Each group company manages contractors and workers with its own formats and criteria.

A platform nobody administers
After go-live, requests have no owner and the configuration stops following the process.

Local teams with no time
Site managers have an operation to run, not a platform to administer.

Six components, from analysis to evolution

1. Diagnosis
2. Requirements and authorisation criteria
3. Configuration, data and testing
4. Training and go-live
5. Administration, support and document operation
6. Evolution

Three collaboration models

A — Implementation and internal team enablement
AISP implements the platform and prepares the client's team to administer it.

B — Implementation with ongoing administration and support
In addition to implementation, AISP administers the platform and provides technical support from Portugal.

C — Implementation with administration and document operation
In addition to everything in model B, an AISP team analyses and operates the documentation.

Request a proposal

Tell us which countries, companies and sites you work in and which platform you use. We will prepare a proposal tailored to your operation.
