AISP-GEDOC

PPE distribution and management

We receive the client's PPE, define the procedure with you and dispatch the equipment to each worker as soon as they are approved. Every delivery is recorded and signed, and expiry dates and inspections are controlled, with a notice to the company when action is needed.

24 to 48 working hours
dispatch after the worker is approved

Every delivery signed
distribution record signed by the worker

Expiry dates and inspections
controlled on the platforms, with notice to the company

From request to evidence
one circuit, from stock to proof of delivery

From the PPE request to proof of delivery

01 Define the procedure
The client defines which PPE each activity receives, who receives it, the sizes and the rules that apply.

02 Send and receive stock
The client sends the PPE to AISP's premises. We receive and store the stock by item reference.

03 Request
The PPE request for a worker follows the procedure defined by the client.

04 Approve
Companies and workers are approved on the access-control platforms, based on documentary criteria. Without approval, the shipment is not unlocked.

05 Select
With the worker approved, we select the PPE according to the activity and the sizes defined.

06 Prepare the record
The shipment includes the PPE distribution record, which the worker must sign.

07 Dispatch
Dispatch within 24 to 48 working hours after approval. Delivery at destination depends on the carrier and the country.

08 Deliver and sign
The worker receives the PPE and signs the distribution record.

09 Collect the evidence
AISP collects and registers the signed proof and uploads it to the platform, where it counts as a control document.

10 Control and replace
The platforms control expiry dates and inspections, and the company is notified. When equipment becomes obsolete or damaged, we replace it.

Included

- Receipt and storage of the PPE sent by the client
- Selection and preparation of the shipment according to the procedure
- Dispatch within 24 to 48 working hours after approval
- Signed distribution record, collected and registered by AISP
- Control of expiry dates and inspections, with notifications
- Replacement of obsolete or damaged equipment, with logistics
- Tags, when the client defines them
- Collection of obsolete material, on request

Out of scope

- Purchase of the PPE and deciding which PPE each activity requires: this is the client's
- Technical inspection of the equipment: carried out by whoever the company defines
- Technical validation of the content of the inspection document
- Conformity and certification of the PPE sent by the client

What is defined, and what is fixed in the proposal

Dispatch after approval	24 to 48 working hours
Delivery at destination	Depends on the carrier and the country, and is confirmed in the proposal
Stock replenishment	Defined with the client and confirmed in the proposal
Replacement lead times	Defined in the proposal
Expiry and inspection notices	Configured with the client
Evidence available	Signed distribution record and inspection document, on the platform

Hand us the PPE circuit and keep control

We show the process with your case: which PPE you distribute, to whom, and how we control deliveries, expiry dates and inspections. A meeting with no commitment.
